

Dear teachers,

We represent the European Science Education Academy, a joint effort by several european institutions to bring innovation to schools. Our vision is to empower teachers to offer more inovative ways to promote learning, in particular in the field of science and ICT.

We are contacting you to bring to your attention a series of possibilities to bring the best oppotunities to your teachers via a series of courses promoted in partnership with leading institutions in diverse fields like: Physics, Astronomy, Natural Sciences, etc.

We are offering a series of training courses where the teachers will have the opportunity to learn how to use innovative tools and resources such as story telling platforms, online labs, inquiry based authoring tools, planetarium software.

Our courses offer opportunities to help teachers improve educators competence profiles by involving the participants in hands-on experience on learning how to integrate virtual and augmented reality, using game environments, 3D printing, etc., while providing deep learning opportunity to the students.

Schools can benefit by improving the competence profile of their teachers while reaching excelency in the use of digital tools and resources.

We invite you to take a look at the courses we are offering here: [ESEA](#)

We consider the participants of our training academies to be partners in a mission to make a difference in the way we engage students in learning and how we help the new generation to build their science literacy while developing a better sense of global citizenship. Our mission is to make a difference through our continuous support to educators in their professional development towards effective science teaching and learning.

Applicants to our training courses are entitled to receive support to apply to funding opportunities such as Erasmus + applications for mobility actions (deadline February 2nd).

We hope that this message will reach your attention and furthermore to have you with us in one of our events or as partners in our projets.

All the best

The ESEA team
